

## Glavenir Vacuum Insulated Glass

### Care Guide

Congratulations on purchasing vacuum insulated glass! This document outlines how you should care for your new 21st century glass.

Glavenir is no more sensitive than any other modern high performance glass. Care should always be taken with cleaning and abrasives, including metallic objects, should never be used on either surface.

### Care

When cleaning VIG:

- use “clear” cleaning fluids manufactured for coated glass e.g. “Windex Clear”.
- avoid the use of metallic tools or scrapers, blades etc.
- the use of a squeegee is not recommended because dirt can be dragged across the glass, causing damage.
- use clean microfibre cloths.
- where clear impact safety film has been installed by a third party, ensure that their directions are followed for care and maintenance.

### Maintenance

When painting or working on window frames, tape up and protect the glass from being damaged.
